Education

University of South Florida

Expected May 2026

Bachelor of Science in Computer Science (GPA: 3.76)

Tampa, FL

- **Awards:** Dean's List (Fall 2023, Fall 2024), USF Green & Gold Directors Waiver Award (Merit-Based Scholarship).
- **Coursework:** Data Structures and Algorithms, Database Design, Software System Development, Operating Systems, Computer Architecture, Artificial Intelligence, Object-Oriented Programming.

Technical Skills

Languages: Python, C, C++, C# (OOP), JavaScript, SQL, HTML, CSS (Tailwind).

Frameworks & Tool: React.js, Node.js, TypeScript, Express, MongoDB, REST APIs, Postman, .NET (basic).

DevOps and Cloud: AWS, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitLab, Serverless Framework, CI/CD.

System & Design: Microservices, Serverless Architecture, Cloud Infrastructure, API Design, Database Design, Linux.

Experience

Software Engineer Intern | SimrikMed LLC

Aug 2024 – Jun 2025

- Developed HIPAA-compliant front-end features using React, and TypeScript reducing load times by 40% for 1,000+ users.
- Built secure, scalable REST APIs with Node.js, improving reliability by 25% through enhanced database queries.
- Automated CI/CD pipelines and test workflows using Jenkins and Bash, cutting deployment time by 30%.
- Hardened infrastructure provisioning via Bash scripts, accelerating feature rollouts by 50% across cloud environments.

Software Engineering Intern | Mandavya Construction

May 2024 – July 2024

- Developed a React-based dashboard to visualize project progress from multiple construction sites, reducing weekly reporting time by 50%.
- Streamlined equipment tracking across job sites with a centralized digital log, improving resource allocation efficiency by 30%.
- Digitized safety and inspection checklists with a responsive React interface, reducing manual reporting time by 60%.

Student AV Technician | University of South Florida

Jul 2024 – Present

- Optimized AV systems in 20+ classrooms using Crestron tools, reducing technical disruptions by 35%.
- Diagnosed and resolved software and signal issues, minimizing classroom downtime by 30%.

Projects

[ShareSpace: Microservices-Based Platform](#) | React, Node.js, Kubernetes, Docker, CI/CD, Event-Driven Architecture

- Led end-to-end development and deployment of 5+ back-end microservices using Node.js and Kubernetes, boosting feature rollout velocity by 40% in a SaaS-style application.
- Designed a scalable event-driven architecture with a custom Event Bus, enabling 100% consistency across decoupled services and laying the foundation for future data pipelines.
- Built and integrated a React front-end with API and moderation workflows, reducing user-reported issues by 95% through real-time validation and secure communication.

[Budget Buddy: A Full-Stack Web Application](#) | React.js, Node.js, MongoDB, Express.js, REST API

- Built a mobile-responsive MERN-stack app with 10+ React components to manage income and expenses.
- Designed 10+ RESTful API endpoints using Express and MongoDB, reducing frontend load time by ~30%.
- Integrated dynamic charts with Chart.js and refactored React state logic to improve UI re-render efficiency by 40% during updates.

[DecSecOps CI/CD Pipeline](#) | TypeScript, Docker, GitHub Actions, Kubernetes, Argo CD

- Built production-grade TicTacToe app with CI/CD automation, achieving 90% faster releases using GitHub Actions.
- Deployed using Kubernetes and Argo CD, ensuring 100% GitOps consistency across 3 replica pods.
- Secured the container pipeline with automated Docker image scanning, eliminating 100% of critical vulnerabilities.
